Dear Premier Brumby,

The People of Australia want a safe climate future. As one of the countries with the most renewable energy potential we have the opportunity to be leaders in the clean, green renewable energy revolution. To avoid catastrophic climate change we must transition from coal and other fossil fuels as soon as possible.

The Victorian Labor Party has the chance to create a job rich and pollution free future by legislating for 100% renewable energy supply for our state by 2020.

I call upon the Brumby Government and Australia Labor Party to be part of the global vision Al Gore has put forward: for 2020 to be the year we are powered by renewable energy, for a safe climate.
